Guide to update the Report
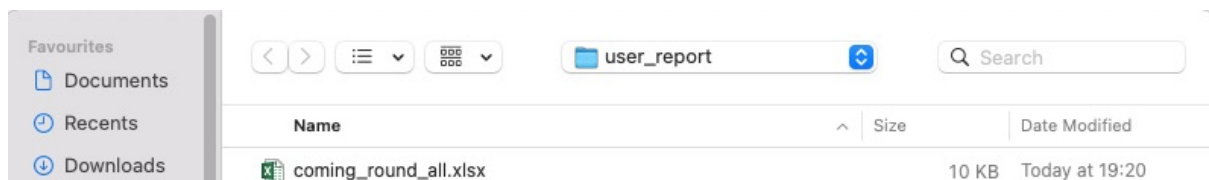

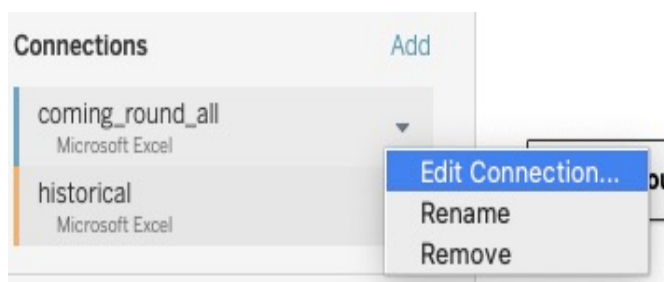

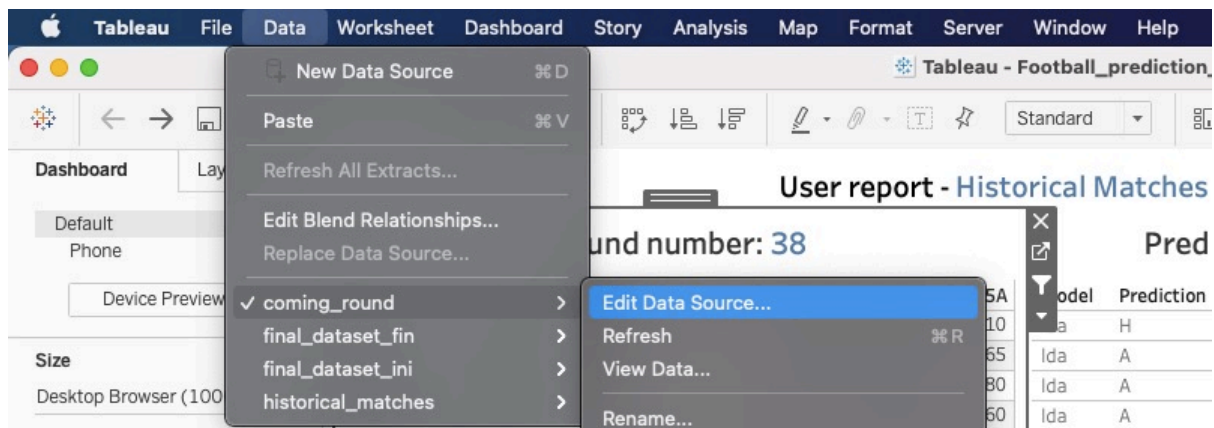

1. Open a notebook (i.e. Anaconda).

2. Copy the code from the [repository](#).

3. Paste the code to your notebook.

4. After running a code an excel file will be generated. Change the last line of code to change the location where the file will be generated.

```
In [126]:  # Exporting the results

           coming_round_all.to_excel('user_report/coming_round_all.xlsx')
```

5. Open the 'Football_prediction_report.twb' from the [repository](#) and open it.

6. Link the coming_round table to the file downloaded in the point 4.

7. The Dashboard1&2 are part of the 'user' report and the other parts were part of the drawing of the conclusions.

8. Save the report.
